#### **DETAILED ACTION**

Page 2

1. This office action is in response to amendment dated: 2/16/07. Based on this amendment, claims 25-43 are pending.

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission (IDS) filed on 2/16/2007 has been entered.

## Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on 2/16/2007 was filed after allowance. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

#### Allowable Subject Matter

4. Claims 25-43 are allowed.

#### **REASONS FOR ALLOWANCE**

5. The following is an examiner's statement of reasons for allowance:

The prior art of record does not disclose, teach or suggest directly, or indirectly the following limitations in combinations with other limitations of the claims, as follows:

# As recited by claims 25;

- transmitting data flames from a first base station to a mobile station in accordance
  with a first downlink data frame time offset, wherein said first downlink data
  frame time offset is measured from a channel flame timing associated with the
  first base station;
- measuring a reception downlink time offset experienced at said mobile station
   between a first downlink transmission received from said fast base station and
   a second downlink transmission from a second base station;
- communicating said measured reception downlink time offset from said mobile station to at least one of said first and second base stations;
- determining a second downlink data frame time offset based on said measured reception downlink time offset, wherein said second downlink data frame time offset is measured from a channel flame timing associated with the second base station, wherein said first and second downlink data frame time offsets are in increments of a predetermined number of chips;
- communicating said second downlink data frame time offset to said mobile station for said soft handoff operation;
- transmitting data frames from said second base station to said mobile station in accordance with said second downlink data frame time offset, wherein data frames transmitted from said first and second base station carry the same data for said soft handoff operation..

Art Unit: 2617

## As recited by claims 30 and 35;

- measuring a reception downlink time offset experienced at a mobile station between a
  first downlink transmission received from a first base station and a second
  downlink transmission from a second base station;
- communicating said measured reception downlink time offset from said mobile station to at least one of said first and second base stations;
- receiving data frames from said first base station at said mobile station in
  accordance with a first downlink data flame time offset, wherein said first
  downlink data frame time offset is measured from a channel frame timing
  associated with the first base station;
- receiving a second downlink data frame time offset at said mobile station for said soft handoff operation, wherein said second downlink data frame time offset is determined based on said measured reception downlink time offset, and wherein said second downlink data flame time offset is measured from a channel frame timing associated with the second base station, and wherein said first and second downlink data frame time offsets are in increments of a predetermined number of chips;
- As recited by claim 35 only, receiving data frames from said second base station at said mobile station in accordance with said second downlink data frame time offset, wherein data frames transmitted from said first and second base stations carry the same data for said soft handoff operation.

Page 4

Art Unit: 2617

As recited by claims 38 and 41,

• transmitting data frames from a first base station to a mobile station in accordance

with a first downlink data frame time offset, wherein said first downlink data

flame time offset is measured from a channel frame timing associated with the first

Page 5

base station;

receiving a measured reception downlink time offset from said mobile station at one

of said first and second base stations, wherein said measured reception downlink time

offset is the reception ~me offset experienced at said mobile station between a first

downlink transmission from stud first base station and a second downlink

transmission from a second base station;

• determining a second downlink time offset based on said measured reception

downlink time offset, wherein said second downlink data frame time offset is

measured from a channel flame timing associated with the second base station,

wherein said first and second downlink data flame time offsets are in increments era

predetermined number of chips;

communicating said second downlink data frame time offset m said mobile station for

said soft handoff operation;

transmitting data frames from said second base station to said mobile station in

accordance with said second downlink data flame time offset, wherein data frames

Application/Control Number: 09/576,063 Page 6

transmitted from said first and second base station carry the same data for said soft handoff operation..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Inder P. Mehra whose telephone number is 571-272-3170. The examiner can normally be reached on Monday through Friday from 8AM to 5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Feild can be reached on 571-272-4090. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
